- Sidewalk Repair or Installation Cost

Appendix C: Proposed Roadway Improvement Plan

- FY2023-2027 (2021 Pricing)
- FY2023-2027 (2023 Pricing)

1.0 Introduction and Methodology

1.1 Overview

The Town of Sterling retained WorldTech Engineering LLC to provide engineering services to assist the Town in establishing a baseline inventory and perform a condition assessment program to be used in the update of the Town's Pavement Management Program. The scope of the work included collecting and analyzing field data on roadways pertinent to the update of a multi-year Capital Improvement Plan (CIP) to assist the Town in the implementation of recommendations with respect to pavement preservation and sidewalk reconstruction. Data collection focused on identifying distresses in the Town's roadway network, focusing on Town-owned streets.

1.2 Community Profile

The Town of Sterling is a predominantly urban community with a 2018 population of 8,190 (2020 MassDOR Municipal Databank), and a land area of approximately 30.6 square miles, which yields a population density of 267 persons per square mile. There are approximately 106 centerline miles of roadway in the Town, of which 92.3 are Town-owned, and the remainder under the jurisdiction of the Massachusetts Department of Transportation (MassDOT), Department of Conservation and Recreation (DCR), or are private.

1.3 Establish Roadway Inventory Database

WorldTech utilized the MassDOT Road Inventory File (RIF) coupled with GIS data available from the Town to establish the Pavement Management Program Database in Microsoft Access. WorldTech coordinated with the Town to ensure the list of roadways identified as Town-accepted in the RIF is consistent with the Town's current list of accepted maintained roadways (92.3 miles). Since the RIF is used to calculate a percentage of the Chapter 90 funding that is allocated to each municipality, roadway mileage updates are encouraged to ensure that each municipality receives their correct Chapter 90 apportionment. WorldTech assisted the Town in preparing and submitting roadway inventory mileage updates to MassDOT as applicable.

1.4 Pavement Inspection Data

WorldTech field verified all existing pavement inspection data and integrated it into a Pavement Management Database. Pavement inspections were completed in the field utilizing a field laptop computer and Microsoft Access Database. Inspections were conducted in April 2021-June 2021. Attribute data collected included:

Pavement Attributes

- Length and Width;
- Roadway Material;
- Pavement Distress Type;
 - Alligator Cracking;
 - Random Cracking;
 - Transverse/Longitudinal Cracking;
 - Potholes;
 - Raveling;
 - Rutting;
 - Patching

Sidewalks

- Length and Width;
- Material (Concrete, Asphalt, Brick, Mix);
- Condition (Good, Fair, Poor)

Pavement distresses identified in the inspection data were incorporated into the database by severity (Low, Moderate, High) and extent (0-100%) for each roadway segment. This attribute data was used to calculate a Pavement Condition Index (PCI) for each roadway segment based on the procedures outlined in ASTM D6433, *Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys*. The PCI is a numerical measure of the pavement's integrity and surface operational condition, ranging from 0 (worst) to 100 (best). Curb, sidewalk, and striping data was also collected and inventoried simultaneously with the pavement data. Sidewalk data collected during the onsite inspection were material type, width, and overall condition.

The PCI values were used to identify appropriate repair strategies for each roadway segment. Generally, the following repair strategies were applied based on a range of PCI values:

Repair Strategy	PCI Range
Reclamation	0-55
Mill and Overlay	55-75
Crack Seal	75-90
Defer Maintenance	90-100

2.0 Summary of Findings

2.1 PCI and Repair Bands

The Pavement Condition Index (PCI) varies throughout Sterling. It is shown graphically below (Figure 1) in groups outlined by predefined repair bands. The total mileage of roadways with a PCI range of 0-55 (recommended repair of Reclamation) is 10.9 miles. 31.9 miles of roadway fall into the PCI range of 55-75 (Mill and Overlay). 27 miles of roadway fall into the PCI range of 75-90 (Crack Seal). 22.6 miles were determined to be in excellent condition (PCI range of 90-100) and do not require maintenance at this time.

The Town was found to average an average PCI of 74, indicating that roads are overall in fair to good condition.

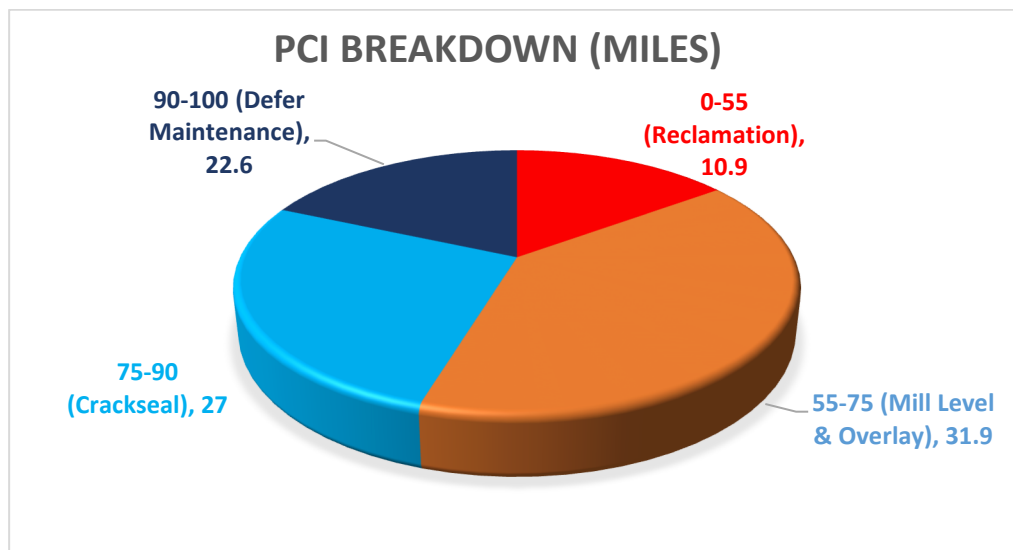

Figure 1: Summary of PCI and Repair Strategies on Town Roads

2.2 Sidewalks

Sidewalks are provided along a total of 2.3 miles of Town-accepted streets. Figure 2 shows a graphic comparison of the Town-accepted roadway mileage with sidewalks present on one side, both sides, or no sidewalk.

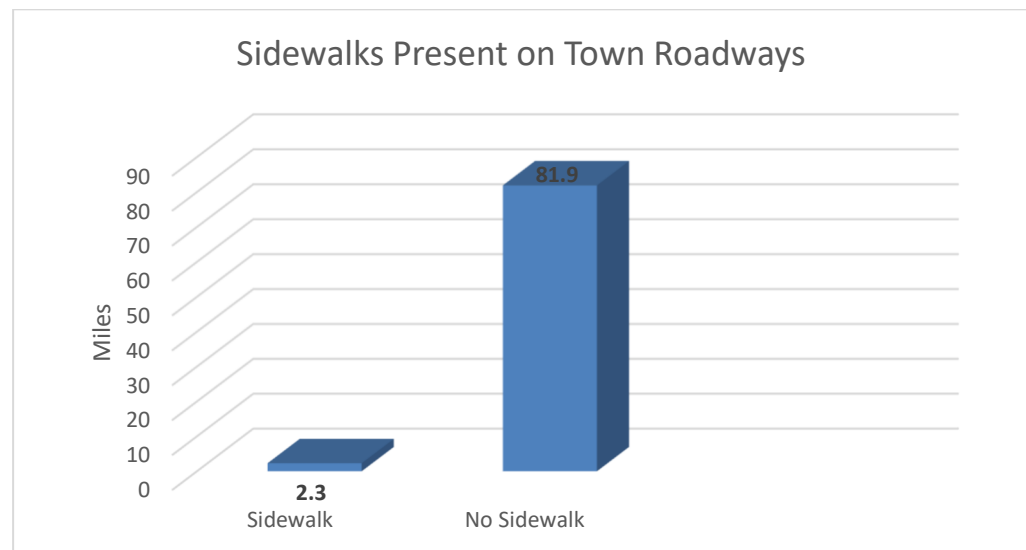

Figure 2: Summary of Sidewalk on Town Roads

A complete inventory of the roadways inspected, along with recommended repair strategies and estimated repair costs, is included in the Appendix B.

3.0 Appendices

When looking at estimates in the appendices there are key components to keep in mind:

- Costs of roadways recommended for reclamation or mill and overlay includes the estimated cost for only the roadway
 - Add estimated cost from sidewalk repair cost report to get total number for both
- Estimates do not include green infrastructure enhancements and only include minor drainage modifications to the existing system
 - Detailed repair estimates will yield larger costs
- Sidewalk estimates assume a 5' width and granite curbs the full length for both sides of the roadway
- Hydrant replacements/ additions are not accounted for as part of the estimated rehabilitation cost of roadway segments
- Segmented construction cost estimates do not include minor intersection work at abutting side streets
- Included in the reports are prices from the original inspection in 2021 along with updated 2023 prices to compare

Town of Sterling, Massachusetts

Pavement Management Program

Pavement Repair Methods and Banding (2021 Pricing)

Repair Method	PCI Range		Unit Cost (per sy)
Reclamation	0	55	\$105.00
Mill and Overlay	55	75	\$35.00
Crack Seal	75	90	\$10.85
Defer Maintenance	90	100	\$0.00

Note: Actual repair method may vary based on subsurface conditions or other site-specific criteria.

Town of Sterling, Massachusetts

Pavement Management Program

Pavement Repair Methods and Banding (2023 Pricing)

Repair Method	PCI Range		Unit Cost (per sy)
Reclamation	0	55	\$70.00
Mill and Overlay	55	75	\$25.00
Crack Seal	75	90	\$10.85
Defer Maintenance	90	100	\$0.00

Note: Actual repair method may vary based on subsurface conditions or other site-specific criteria.

Town of Sterling, Massachusetts

Pavement Management Program

Backlog Summary by Repair Method (2021 Pricing)

Repair Method	Length (Miles)	Estimated Cost	Average PCI
Reclamation	10.9	\$12,926,487	44
Mill and Overlay	31.9	\$14,128,028	63
Crack Seal	27.0	\$3,990,081	82
Defer Maintenance	22.6	\$0	96
Total	92.3	\$31,044,595	

Average PCI: **74**

Note: Due to rounding, numbers may not add up to totals
